

## **Audio Output Transformer** LL1517

LL1517 is an audio output transformer for balanced or unbalanced drive. The transformer is built from two threesection coils, with primaries and secondaries separated by electrostatic shields, and a audio C-core of our own production. The transformer is housed in a mu-metal housing.

The LL1517 has sufficient low copper resistance to meet broadcast specifications in a conventional drive configuration, but is (as all output transformers) ideally used with mixed feedback drive circuits. (See separate paper for mixed feedback design principles).

## **Turns ratio:**

Dims (Length x Width x Height above PCB (mm)): Pin layout (viewed from component side) and winding schematics: 1 + 1 : 1 + 147 x 34 x 18

Spacing between pins:	5.08 mm (0.2")
Spacing between rows of pins:	35.56 mm (1.4")
Weight:	105 g
Core:	Audio C-core
Housing:	Mu-metal
Rec. PCB hole diameter:	1.5 mm
Static resistance of each primary:	9.2 Ω
Static resistance of each secondary:	9.5 Ω
Leakage inductance of secondaries (sec. in series):	0.3 mH
No-load impedance:	$>1k\Omega @ 50 Hz, +20 dBU$
Optimum source impedance:	Minus 18 $\Omega$ (See above)
<b>Balance of output</b> (according to IRT, source < 10 $\Omega$ , Load 600 $\Omega$ ):	> 60 dB
Maximum output level before saturation (sec. in series, load 600 $\Omega$ )	+ 24 dBU @ 30 Hz
<b>Distortion</b> (achieved with mixed feedback drive circuit, load 600 $\Omega$ )	< 0.03 % @ 20 dBU, 30Hz
<b>Frequency response</b> (source $10 \Omega$ , load $600 \Omega$ ):	10 Hz 80 kHz +/- 0.3 dB
<b>Loss across transformer</b> (at midband with 600 $\Omega$ load):	0.3 dB
Isolation between primary and secondary windings / between	
windings and core:	4 kV / 2 kV

4 kV / 2 kV
